

THE ENDOLIFTX[®]
ADVANTAGE:
NON-SURGICAL
LIFTING WITH
LONG-LASTING
RESULTS

ENDOLIFT® AND ENDOLIFTX® ARE MEDICAL LASER TREATMENTS PERFORMED WITH EUFOTON® LASEmaR® 1500 WL TO STIMULATE BOTH DEEP AND SUPERFICIAL SKIN LAYERS, TIGHTEN THE CONNECTIVE SEPTA AND ENCOURAGE THE FORMATION OF NEW DERMAL COLLAGEN. WHILE THE PROCEDURES ARE VERY SIMILAR, THERE ARE SOME KEY DIFFERENCES IN TERMS OF SPECIFIC PROTOCOLS THAT ADAPT TO THE PATIENT'S INDIVIDUAL NEEDS.

HOW DO THEY WORK

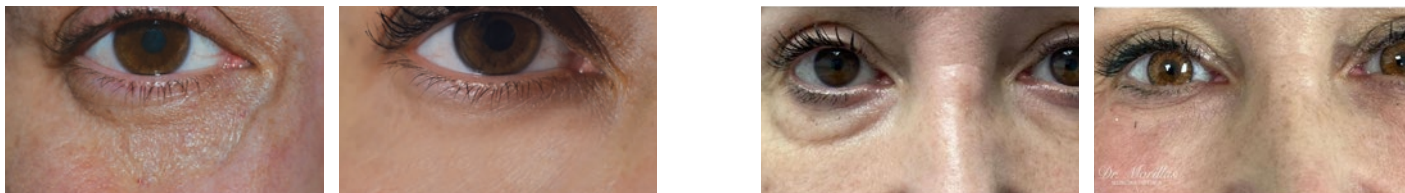

ENDOLIFT® and ENDOLIFTX® are two non-surgical procedures that use the new Eufoton®'s ELX micro-optical fibers. ELX fibers are inserted under the skin without incisions and create micro-tunnels aligned with antigravitational vectors. This laser WL interacts perfectly and selectively with water and fat, triggering neo-collagenases and metabolic functions in the extracellular matrix. As a result, collagen production increases in deep skin layers, leading to improved retraction and tightening without creating extra thermal damage or fibrosis. If needed, the selective laser WL can further activate the lysis of adipose cells. Patients experience minimal to no downtime with ENDOLIFT® and ENDOLIFTX® and can get back to their regular routine in a few hours, without pain or recovery time associated with surgical or cannula assisted procedures.

ENDOLIFT® ADVANTAGES

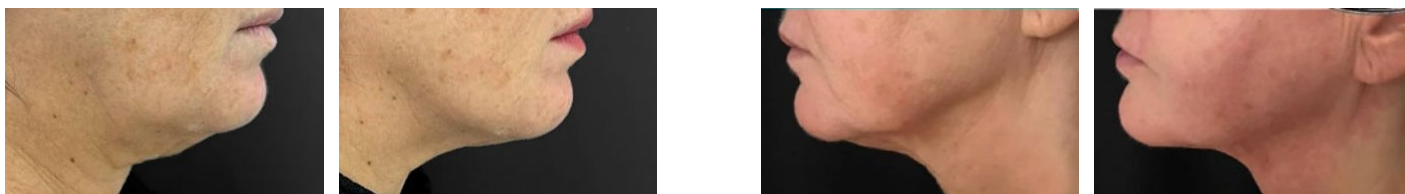

- The best office-based procedure for skin tightening
- Safe and immediate effects with long term results
- Minimal or no post treatment downtime
- Pure naked fiber for the most gentle sliding in connective septa remodelling
- Smallest calibers don't require any needle (facial cannula free treatment)
- Extra safe both in anterograde & retrograde action
- Suitable for all ages, phototypes, tanned skin and skin thickness
- Therapeutic synergy with many surgical and aesthetic treatments (Lightscan™)

ENDOLIFT® ELX FIBERS

Endolift® ELX fibers are the EUFOTON®'s latest innovation for the most precise laser delivery. With enhanced emission and a lighter, safer coating, these sterile micro-optical fibers offer even better performance and shorter treatment time for your patients.

Endolift® ELX Micro-optical fibers are available in two tip designs and in six different calibers:

200 / 250 / 300 / 400 / 500 / 600 micron

SAFETY AND EFFECTIVITY DELIVERED

- New high-tech coating for 20% better performance compared to previous fibers system
- New patented triple polishing and lapping process for tending 0 carbonization and no high peak temperature
- High protection sheath for an enhanced operative ergonomics
- Clinically proven and certified according to the most rigid regulatory standards
- Further reduction of the working time and energy delivered
- 12 sizes (6 linear/6 radial) of disposable micro-optical fibers for different indications on face and body
